

Trouw Nutrition GB - Reliable solutions for calves

REARING Greenline within

An easy-mixing skim based product, which is ideal to promote early bloom and a healthy looking calf, suited for many systems, but particularly those selling stock at a young age and those requiring a little something special from their youngstock.

SUPER HERDBUILD Greenline within

An easy-mixing milk based on high quality whey proteins, ideally suited to the professional calf rearer or larger scale dairy units, looking for high performance.

PREMIUM XL Greenline within

This excellent easy-mixing product enables fast cost-effective growth and development with enhanced concentrate feed intake at this critical stage in life.

SUPREME HEIFER Greenline within

A new easy-mixing product, resulting from 4 years of research into accelerated heifer rearing. This new high protein milk replacer is suitable for either bucket systems or Holm and Laue calf feeding machines or similar.

ECO WHEY

An economical whey based product that is highly versatile and effective, suitable for a wide range of systems.

ECO SKIM

A skim based economical product, ideal for promoting early calf quality, growth and bloom.

PROTIMAX®

Protimax® is egg powder rich in specific proteins which is the result of extensive research and development. Protimax® is produced by Trouw Nutrition who have identified the correct profile and inclusion levels to achieve proven results.

PROTIMAX BOLUSES

Specific egg proteins help calves meet the challenges of early life, when a higher level is required.

GREENLINE™

"Greenline within" is an effective complex of non-antibiotic ingredients included to help maintain digestive tract health.

ACTIPRO-PLUS

A special complex of pre-digested (hydrolysed) proteins which are more readily digested and absorbed.

VITAMINS-18 month shelf life

The vitamin levels in calf milk replacers is a key area essential to the maintenance of calf health. High levels of inclusion and an 18 month vitamin stability ensure that correct levels of fortification are achieved.

calf
rearing

 **Trouw Nutrition**
INTERNATIONAL

In a tough market, you can rely on the **Milkivit Denkamilk** range to help maintain the growth and health of your calves at every stage, ensuring your herd goes from **strength to strength**.

The new range retains all of its exceptional benefits, backed by technical experts and innovation.

Enhanced Early Nutrition, the Trouw Nutrition approach to calf rearing

Trouw Nutrition specialises in calf nutrition, supplying a full range of high quality products including skim and whey based milk replacers.

Years of breeding have gone into every calf that you produce. Combine these with the expertise and support from two of the biggest names in calf nutrition and their futures look bright.

Research and Development

Trouw Nutrition is strongly committed to research and development. Our customers benefit from access to shared research, knowledge and experience from Trouw Nutrition and DenkaVit.

Milkivit

DENKAVIT

The **Milkivit Denkamilk** range has been designed to give your herd the best possible start in it's early years, coupled with the following benefits:

- **Low cost Calf Rearing**
- **Time and labour cost saving**
- **A significant aid to maintaining health and growth performance**
- **Full technical support**
- **Products and team backed by world-class research and development**

Holm & Laue 100 Calf Feeding Machine

A fully automatic calf feeding machine, which reduces manual labour and time, reduces stress to the calves and meets all modern feeding requirements.

All Milkivit Denkamilk products are suitable for H & L automatic feeders and similar machines.

GROWING TOGETHER FOR A HEALTHIER FUTURE
