

The Nordos range of intelligent feed additives includes:

Acidifiers –

A range of organic acids, 'Nutracid', for inclusion into animal feeds.

Natural pigments

An alternative for synthetic red and yellow pigments, for inclusion into layer feeds.

Coated products

Essential feed ingredients such as amino acids, vitamins and choline are coated within a fatty acid matrix, to protect the ingredients from rumen degradation.

Anti dust products

Coated products, such as selenium, cobalt and iodine, that reduce the generation of dust during processing.

Tonilys

Acts as a toxin binder, and therefore prevents the detrimental effects of toxins on animals' immune system.

Oxytrap

Liquid antioxidant that prevents the oxidation of fats destined for animal feed.

Bio-Add

A range of organic acids to control salmonella and inhibit mould in feed raw materials and finished diets.

Funginib

Anti fungal treatment for cereals and raw materials.

Nordos Fat W3

A coated blend of concentrated and refined Omega 3 oils, which are stable against oxidation. Nordos fat can be incorporated into the diets of laying hens, dairy cows and pigs to enrich eggs, milk and pig meat .

Enzymes

A range of enzymes that aid the optimal digestion of feed ingredients.

Raftifeed

An Inulin based product that naturally increases the efficiency of the digestive tract.

Who is Nordos?

Nordos is the feed ingredient business of Nutreco – Trouw Nutrition's parent company. Nutreco is a world-wide organisation supplying the Agriculture and Aquaculture industries.

Nordos specialises in the sale and distribution of a comprehensive range of raw materials. The company also produces a range of 'Intelligent Feed Additives' – products that focus on animal nutrition, animal health and feed and premix technology.

And because **Nordos** is part of the Nutreco organisation, our customers have access to a world-wide team of researchers and nutritionists who can offer expert advice on every aspect of animal nutrition, applying their extensive knowledge to your specific problem or requirement.

Our world-class systems, quality control, and unparalleled knowledge of animal nutrition, ensure that **Nordos** products are always safe and highly cost effective.

What's so intelligent about Nordos feed additives?

The feed additive marketplace is a complex one. Knowing that every feed additive you use is of proven quality, efficacy and safety is vital. But in many cases, single ingredients are not able to solve complex problems alone.

Knowing the right product combination for a specific situation is therefore crucial to the success of your animal nutrition programme.

That's why you need Nordos Toolboxes.

Nordos Toolboxes

Nordos Toolboxes is a unique advice package that assists Nordos personnel in recommending the right product combinations to solve your specific problem. Add Nordos Toolboxes to our comprehensive range of feed additives and traded raw materials and you have the recipe for success.

Peace of mind, top performance and cost efficiency in one package.

The Nordos Range of Enzymes

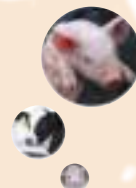

Nordos Enzymes are able to improve the digestion of cereals (wheat and barley) and upgrade vegetable protein sources (soyabeans, rapeseed, sunflower and legumes), in both pig and poultry diets.

Liquid

Innozym Wheat L
Innozym Phytase 2000 L
Innozym Delta L

Granular

Ronozyme WX (CT)
Ronozyme P (CT)
Ronozyme VP (CT)

Benefits include:

- Reduces feed cost by providing flexibility in feed formulation
- Improves pig and poultry performance
- Reduces sticky droppings, producing drier litter and less manure
- Increases metabolisable energy content of a diet
- Range available in liquid or granular forms

Raftifeed®

The Raftifeed® range of products are based on Inulin and Oligofructose. The Inulin is extracted from chicory roots.

Oligofructose - a natural constituent of Inulin - is a prebiotic. It supports the growth of beneficial bacteria, increasing the efficiency of the digestive tract and overall health of the animal.

Benefits include:

- Supports growth of beneficial bacteria (Bifidus, Lactobacillus), and suppression of harmful bacteria (E.coli, Salmonella, Clostridium)
- Improves growth rate and feed conversion through improved metabolism
- Reduces constipation due to bulking effect
- Reduces putrefaction due to improved intestinal microbial balance, reducing faecal odour
- Benefits the environment due to less ammonia and other harmful substances.
