

Dairy Cow Product Range

Introduction

Trouw Nutrition GB offers a wide range of Animal Health Products from the Farm-O-San® group of products.

Farm-O-San offers practical and easy to use products for use over multi species. Within the Farm-O-San range for ruminants there are products for cows, calves and sheep as summarized below.

	Pre-Calving	Calving
Situation	Glucose boost	Rehydration
Solution	Pro-Keto	Reviva

Farm-O-San dairy cow products

Pro-Keto

A dietetic feed for high performing dairy cows based on propylene glycol and glycerine to reduce the risk of ketosis.

Pro-Keto Dry

A dietetic complementary feed for high performing dairy cows for the reduction of the risk of ketosis. It has essential ingredients to contribute to a good start to lactation.

Reviva®

A complementary feed for freshly calved cows to replenish water and electrolyte loss and help recovery. It contains calcium and stimulates dry matter intake.

Other products available in the Farm-O-San range

Calf

Pulmosure

A complementary feed for calves and older cattle that helps breathing and clearing of airways. Also contains vitamin E and selenium.

Rediar

A dietetic feed for calves, developed to stabilize the water and electrolyte balance in case of digestive disorders such as diarrhoea.

PowerFit

A complementary feed for stabilizing water and electrolyte balance. Suitable for use in calves becoming dehydrated as a result of high temperatures and/or stressful situations.

Sheep

Ewe Keto

A dietetic feed for in-lamb ewes, based on propylene glycol and glycerine. It supports the in-lamb ewe with glycogen energy to reduce the risk of pregnancy ketosis.

Pro-Keto Dry

A dietetic complementary feed for high performing ewes reducing the risk of ketosis. It contributes to a good start of lactation.

Reviva Ewe

An easily digestible, highly palatable energy drink for freshly lambed ewes, containing dextrose as one of the energy sources.

Kubilam

A colostrum replacer for newborn lambs and a safe alternative to natural colostrum. It contributes to the development and resistance of the lamb immediately after birth.

Pro-Keto

Farm-O-San Pro-Keto is a dietetic feed for high performing dairy cows, based on propylene glycol and glycerine. Farm-O-San Pro-Keto supports the high yielding dairy cow with glycogen energy to reduce the risk of ketosis.

In the two weeks pre-calving, dry matter intake and glucose supply declines and fat mobilization increases. Supplementing the dry cow with a source of glycogen energy can help to boost glucose supply and reduce the risk of ketosis.

Farm-O-San Pro-Keto includes essential ingredients for a good start to lactation. Propylene glycol and glycerine provide extra energy, niacin and vitamin B12 support energy utilization and choline supports proper functioning of the liver. In addition, Farm-O-San Pro-Keto contains vitamin E and zinc.

Administration and directions for use

Read the instructions on the product label for directions on product usage. Use Farm-O-San Pro-Keto during the transition period and in the first 3-6 weeks of lactation. Administer 100-125 ml twice daily as a top dressing on feed, or by automatic liquid dispensing unit. Administer 250 ml Farm-O-San Pro-Keto twice daily where additional energy could support performance.

Product data

Product name:	Farm-O-San Pro-Keto
Type of feed:	Dietetic complementary feed for dairy cows to reduce the risk of ketosis
Packaging:	Jerry can / drum / IBC
Net content:	5 litre / 25 litre / 200 litre drum / 1,000 litre IBC
Shelf life:	12 months
Storage conditions:	Store in a cool, dark and dry place in sealed packaging

Composition

Propylene glycol, Glycerine.

Specification

Analytical constituents

Moisture	32.5%
Crude protein	0.6%
Crude fibre	0.0%
Crude oils and fats	15.7%
Crude ash	0.3%
Sodium	0.0%

Additives per kg

Vitamins, pro-vitamins and chemically well-defined substances having similar effect:

Vitamin E / All-rac-alpha-tocopheryl acetate	2,500	IU
Vitamin B12 / Cyanocobalamin	100	µg
Nicotinic acid / Nicotinic acid (niacin)	7,425	mg
Choline / Choline chloride	10,000	mg

Compounds of trace elements:

	Total	As element
Zinc sulphate monohydrate, Zinc-Zn	2,860 mg	1,000 mg

Pro-Keto Dry

Farm-O-San Pro-Keto Dry is a dietetic complementary feed for high performing dairy cows for the reduction of the risk of ketosis. Farm-O-San Pro-Keto Dry contributes to a good start of lactation.

As a consequence of the higher energy requirement, a limited intake of dry matter and roughage around parturition can make cows more susceptible to ketosis (acetonemia).

Farm-O-San Pro-Keto Dry includes all essential ingredients for a good start to lactation. Glycogenic energy is provided in the

form of flavoured chicory pulp with propylene glycol. Chicory contains inulin, a fructo-oligo saccharide consisting mainly of beta (2-1) fructosyl-fructose links. Inulin has long been associated with the maintenance and support of a healthy gut flora. Niacin and vitamin B12 are needed for energy utilization. Choline chloride contributes to a normal functioning of the liver.

Administration and directions for use

Read the instructions on the product label for directions on product usage. Use Farm-O-San Pro-Keto Dry in high productive dairy cows around calving to reduce the risk of ketosis. Administer 600g of Farm-O-San Pro-Keto Dry per cow mixed into feed during the last 2 weeks before until 6 weeks after calving.

Product data

Product name:	Farm-O-San Pro-Keto Dry
Type of feed:	Dietetic complementary feed for dairy cows to reduce the risk of ketosis
Packaging:	Bag
Net content:	25 kg
Shelf life:	12 months
Storage conditions:	Store in a cool, dark and dry place in sealed packaging

Composition

Chicory pulp, Propylene glycol, Wheat bran.

Specification

Analytical constituents

Crude protein	5.0%
Crude fibre	10.0%
Crude oils and fats	1.0%
Crude ash	4.5%
Sodium	0.1%

Additives per kg

Vitamins, pro-vitamins and chemically well-defined substances having similar effect:

Vitamin B12	1,200 µg
Niacin	12,000 mg
Choline chloride	4,750 mg

Reviva

Directly before and during calving, cows do not eat and drink, but they do lose water and electrolytes, and their blood calcium level goes down. This may turn the animal listless, resulting in a reduction in dry matter intake.

At the start of lactation most cows are in negative energy balance. They try to compensate for this by mobilizing their body fat. This results in a change in their metabolism, which may result in ketosis. It is therefore important for the animal to increase its dry matter intake as soon as possible.

Farm-O-San Reviva is an easily digestible, highly palatable energy drink for freshly calved cows, containing dextrose as

one of the energy sources. It quickly rehydrates and replenishes mineral loss in the cow and helps to increase blood calcium levels. Farm-O-San Reviva also contains added vitamins.

Farm-O-San Reviva should be given immediately after calving. It helps the cow to rehydrate rapidly after calving. Farm-O-San Reviva increases the cow's activity and forage intake.

Administration and directions for use

Read the instructions on the product label for directions on product usage. Mix at the rate of 50 g per litre of water. Mix 1 kg of Farm-O-San Reviva powder with 10 litres of hot water (40-45°C). The solution will turn orange. Once dissolved, add 10 litres of cold water to achieve a drinking temperature around 25-30°C.

Provide 20 litres of the lukewarm Farm-O-San Reviva solution to the cow once within 30 minutes after calving and before it is given free access to water. A further drink of Reviva may be offered after 24 hours if the cow is still weak or appetite is poor.

Due to its higher content of vitamin D3 compared to complete feeds, Farm-O-San Reviva cannot be fed at more than 1.5 kg per cow per day.

Product data

Product name:	Farm-O-San Reviva
Type of feed:	Complementary feed for dairy cows
Packaging:	Bucket
Net content:	10 kg and 20 kg buckets
Shelf life:	12 months
Storage conditions:	Store in a cool, dark and dry place in sealed packaging

Composition

Dextrose, Whey powder, Calcium carbonate, Sodium chloride, Wheat, Sodium bicarbonate, Whey protein, Cocos oil, Palm oil, Monopotassium phosphate, Sunflower oil.

Specification

Analytical constituents		
Crude protein		6.0%
Crude fibre		0.1%
Crude oils and fats		4.5%
Crude ash		28.0%
Calcium		4.4%
Sodium		4.7%
Additives per kg		
Vitamins, pro-vitamins and chemically well-defined substances having similar effect:		
Vitamin A	80,000 IU	
Vitamin D / Vitamin D3	18,000 IU	
Vitamin E / All-rac-alpha-tocopheryl acetate	2,700 IU	
β-Carotene	200 mg	
Compounds of trace elements:		
	Total	As element
Ferrous chelate of glycine, hydrate, Iron-Fe	920 mg	200 mg
Calcium iodate, anhydrous, Iodine-I	32 mg	20 mg
Manganous sulphate, monohydrate, Manganese-Mn	420 mg	130 mg
Manganese chelate of amino acids hydrate, Manganese-Mn	400 mg	60 mg
Sodium selenite, Selenium-Se	3.3 mg	1.4 mg
Organic form of Selenium produced by <i>Saccharomyces cerevisiae</i> CNCM I-3060 (Selenised yeast inactivated), Selenium-Se	260 mg	0.6 mg
